1862.

NOTICE.

Our establishment is of over twenty years' standing, is located on the east bank of the Hudson, and within two and a half miles of the Hudson River Railroad depot, and steamboat landings from which boats run daily to New York and Albany.

In presenting this new edition of our catalogue, we would state to those unacquainted with our establishment, that the stock of well grown trees, shrubs, etc., is larger than ever before offered to the public.

We are constantly adding to it by importations from different quarters of the world the new varieties of ornamental and fruit trees, and of hardy and exotic plants, as well as those of domestic origin.

Particular care is taken to disseminate only those sorts which are possessed of superior excellence, and succeed well in this country. Numerous foreign varieties are constantly being introduced and circulated without any warrant as to their adaptation to this climate. Great injuries have therefore resulted to fruit growers from this practice.

Our soil is a fine loam, in which trees, etc., make a vigorous growth, and throw out a large amount of fibrous roots, which insures success in transplanting.

We are prepared to grow plants in large quantities,

as our greenhouses, stove, and propagating houses are extensive and upon the most approved plan.

Our stock of foreign and native grape-vines is very large, (particularly Delaware,) and the plants well grown. No unripe wood is used to propagate from, as we fully believe such wood calculated to grow only sickly and worthless vines.

It is very desirable that all orders should be sent early, so that we may select the plants asked for before the time arrives for transplanting. When orders are received late in the season, while taking up, packing, and shipping, we are unable sometimes to fill them as satisfactorily to ourselves, and as advantageously to our patrons. The transplanting season in the spring commences from the 15th to the 20th of March, and in the fall, from the 1st to the 10th of October. Trees and plants when ordered, will be carefully taken up, labeled correctly, and packed in damp moss by experienced hands, so that they will reach their place of destination in perfect order.

We would earnestly advise those who intend to plant evergreens, not to delay to so late a period as has been the practice heretofore. There is great risk in their transportation to any distance, after having commenced their growth, from their liability to heat when in packages. Twenty-four hours, when the weather is warm, will sometimes destroy them. Packages will be delivered at the railroad depot or steamboat at Fishkill Landing, or at the depot of the New York and Erie Railroad, free of charge, except for packing, which will be made only to cover cost. They will be at the risk of the purchaser after they are delivered at the railroad or steamboat landing.

The prices named are for good sized trees. For those of a larger size, a corresponding higher price will be charged. All orders from unknown correspondents, to receive attention, must be accompanied with a satisfactory reference or draft on New York. Purchasers will have their orders executed without delay by a compliance with the above terms. Speculators in trees will be dealt with in a liberal manner. When orders are given, plain and particular directions should be given as to how the packages must be marked, and by what route and conveyance they are to be forwarded.

If any mistakes shall be found to have occurred upon their arrival at their place of destination, we will be obliged to our customers if they will notify us as early as convenient, so that we may at once make amends as far as lies in our power. Catalogues sent to all applicants who enclose a postage stamp for each :

No. 1. Descriptive of fruits, ornamental trees and shrubs.

No. 2. Descriptive of greenhouse, stove, and bedding plants.

D. BRINCKERHOFF & CO.

HINTS ON TRANSPLANTING.

The first step is a thorough preparation of the soil. This may be done by sub-soil plowing, trenching or deep digging. Where the sub-soil is saturated with water, under-drains or open ditches must be put in, as trees or plants will not remain healthy if water is suffered to stand about their roots. A soil capable of growing a fair crop of wheat or corn is in good condition for trees. It may be kept in condition by an annual application of manure, applied as a mulching around the trees late in the fall, and worked in in the spring.

When trees and plants are removed from the nursery as carefully as possible some of the roots will be injured in the digging and packing. At the time of transplanting, those so injured should be cut off smooth with a sharp knife. Standard trees should have their branches so thinned and cut back as to compensate for the loss of roots in taking them from the nursery. The previous year's growth should be shortened in to from four to six eyes.

Those for *pyramids* should have their lower branches shortened in at least one-fourth of the previous year's growth, and the lateral branches more and more as you approach the top. The leading or most upright shoot may have half its new wood taken off. *Yearlings* intended for dwarfs or pyramids should be pruned in fully one-half their growth. All lateral branches should be taken off, which will cause them to throw out branches near the ground.

Planting a tree is an important operation. The hole having been dug sufficiently large to receive the roots, without their being cramped, a person must place it in the hole, carefully watching that he does not get it too deep, while an assistant must spread out in their natural position the roots,

and sprinkle in the soil, so as to fill up all the space, shaking the tree gently while the soil is being put in.

Mulching with long manure is very useful. It should be spread around the tree to a distance of several feet. It prevents evaporation and shields the tree from the severe droughts of summer and the extreme cold of our winters.

Distances for planting.

Standard Apples	30	feet apart each way.		
do Pears.....	20	do	do	
Cherries (strong growing sorts)....	25	do	do	
do Duke and Morello	20	do	do	
Plum, Peach, Apricot and Nectarine,

8 do do	681
6 do do	1,210
5 do do	1,740
4 do do	2,722
3 do do	4,840

NATIVE GRAPES.

No branch of Horticulture has received so much attention in this country as the cultivation of native grapes, and none promises to be so remunerative to the planter. Vineyards have within a few years past been planted in the Western part of this State, and on the Hudson, from which very satisfactory results have been attained. All who have a small piece of ground, in even the most northerly part of the country, can have no good reason for not growing them, as by a proper selection from the varieties now in cultivation, every one may be able to grow them of fine quality.

The grape will do best on loamy or gravelly soil with an open subsoil; where there is water in the subsoil it must be carried off by under draining or trenching before planting, in order to have a satisfactory result.

Such vines only should be selected for planting as have had a healthy and vigorous growth. New sorts have been propagated by some growers from unripe wood, such plants are of little value, and are the main causes of the failure of many persons who have put them out.

Vines grown in small pots and from ripe wood have imperfectly ripened roots, and are, therefore, of much less value as they are greatly enfeebled by such treatment.

Special attention is given to the growing of our native grapes. Our stock is large and plants well grown. Some of the choice varieties are grown in large quantities and will be sold at low rates by the hundred and thousand.

CURRANTS.

Price 5 to 15 cents each.

This valuable and most reliable small fruit is justly beginning to attract more attention than heretofore. New varieties have recently been introduced, which are superior in quality and size. All are of easy cultivation, and will thrive in any common garden soil.

Our prices by the hundred or thousand will be found very low. A number of new Currants are under cultivation, and will be ready for sale in the spring of 1862.

Color.

Attractor.....	White.	Bunches large; good quality.
Cherry.....	Red ..	The largest.
Fertile de Palnan.....	Red ..	Very productive.
Holland Long Grape.....	Red ..	Large; very productive.
Hative of Berlin.....	Red ..	Large; high flavor.
Large White Dutch.....	Red..	Large, and fine sorts, for general use.
do do	White }	
La Versaillaise.....	Red ..	Very large; deep red; beautiful.
Long Bunched Red Dutch..	Red ..	Large; long bunches.
May's Victoria.....	Red ..	Large; light red; late and productive.
Red Grape.....	Red ..	Large; long bunches, and good.
White Grape.....	White.	Large and very fine.

APPLES.

Price 14 cents each—\$12 per 100.

SUMMER APPLES.

Name.	Quality.	Season.
American Summer Pearmain.....	1	August, September.
Bevan's Favorite.....	1	July, Augnst.
Benoni.....	1	August.
Drap d' Or	1	August, September.
Early Harvest, or Prince's Yellow Harvest...	1	July.
Early Golden Sweeting	1	August, September.
Early Joe, or Chapin Apple	1	August, September.
Early Strawberry	1	July, August.
Large Yellow Bough, or Early Sweet Bough..	1	August.
Primate.....	1	August, October.
Red Astrachan.....	1	July, August.
Summer Belle Fleur.....	1.	August.
Sops of Wine or Saponin.....	1	August, October.
Summer Hagloe, or Hagloe Apple, not Crab...	1	August, September.
Summer Rose, Lippincott, or Woolman's Harvest	1	August.
Williams' Favorite.....	1	August.

AUTUMN APPLES.

Autumn Pearmain, or Winter Pearmain	1	October, February.
Fall Orange.....	1	October.
Fall Pippin	1	October, December.
Gravenstein	1	September, November.
Hawley or Douse	1	October, November.
Late Strawberry	1	September, October.
Maiden's Blush.....	2	September, October.
Northern Sweet.....	1	October.
Pomme de Neige, Fameuse.....	1	October, November.

WINTER PEARS.

Beurre d'Aremberg	1	December, January.
Beurre Easter	2	January, April.
Beurre Langelier	1	December, January.
Beurre Sterkman (Van Mone)	1	January, February.
Beurre Superfin	1	January, February.
Columbia, * Columbian Virgalieu	1	November, January.
Doyenne d'Hiver Nouveau	1	January, May.
Elize d'Heyst (Espereen)	2	March, April.
Glot Morceau	1	December.
Lawrence*	1	November, February.
Passe Colmar	2	December, January.
Pound, or Winter Bell	2	December, March.
Princess Royal (Groom's)	1	January.
Triomphe de Jodoigne (B'r.)	1	December.
Vicar of Wakefield, or Monsieur Le Cure	2	November, January.
Winter Nelis	1	December, January.

Many other varieties of recent introduction are in course of cultivation, not having been tested, they are not placed in the Catalogue.

The following are of the most approved for orchard culture: Dearborn's Seedling, Belle Lucretive, Tyson, Bartlett, Rostiezer, Andrews, Flemish Beauty, Duchess d'Angouleme, Urbaniste, Louisa Bonne, Beurre d'Anjou, Pratt, Beurre Diel,

Glout Morceau, Fulton, Doyenne Boussock, Beurre Bosc, Sheldon, Buffum, Onondaga Seedling, etc.

Those marked thus (*) do not succeed on the Quince.

PEARS ON QUINCE STOCKS FOR DWARF TREES.

The utility of dwarf Pear trees on the Quince stock, for garden culture, is now so well understood, and the demand for them so great, that we have, for the past three years, given this subject especial attention; we have now a large stock of nearly all the leading varieties that thrive on this stock for sale this coming season.

Persons not acquainted with the varieties that succeed on the Quince stock, by leaving the selection to us may rely on receiving the best sorts, as we cultivate none others on this stock.

PLUMS.

Price 30 cents—\$25 per 100.

Name.	Quality.	Color.	Season.
Bradshaw.....	1	Red	August.
Bleecker's Gage.....	1	Yellow.....	August.
Cherry or Early Scarlet	2	Red	July.
Cherry Golden.....	2	Yellow.....	July.
Coe's Golden Drop.....	1	Yellow.....	Sept., Oct.
Dominie Dull	1	Purple.....	September.
Duane's Purple.....	2	Purple.....	August.
Emerald Drop (Downing's).....	1	Green.....	August.
General Hand.....	1	Yellow.....	September.
German Prune	1	Purple.....	August.
Green Gage (True).....	1	Green.....	August.
Huling's Superb.....	1	Green.....	August.
Imperial Gage (Prince's) <i>Flushing Gage</i> ,	1	Green.....	September.
Imperial Ottoman	1	Yellow.....	August.
Jefferson.....	1	Yellow.....	September.
Lawrence Favorite.....	1	Green	August.
Lombard, <i>Bleecker's Scarlet</i>	2	Red.....	September.
McLaughlin.....	1	Green.....

<i>Thuia Siberica</i>	Siberian Arbor Vitæ..	50

The stock of Evergreens is large, and the Trees thrifty and well formed. Nearly everything named in the above list is grown in large quantities. The soil here is perfectly adapted to the growth of Evergreens. In consequence of a large amount of fibrous roots, Trees are rarely lost from transplantation.

The prices affixed above are for fair sized trees. For those of a smaller size a proportionately lower price will be charged.

Many of the new and rare Evergreens are under a course of propagation, and will be ready for sale in the Spring of 1863. Our prices will be greatly reduced by the hundred or thousand.

DECIDUOUS SHRUBS.
